Pat (Patricia/Patrick) 1

- ____ years old
- Employed as a(n) ________
- Lives in __________

Background knowledge and skills

- their software systems are new to them.
- describes themselves as a “numbers person”.
- knows plenty of Math and how to think in terms of numbers.
- , Pat likes working with numbers.

Motivations and Attitudes

- **Motivations**: Pat learns new technologies when they need to, but *doesn't spend their free time exploring technology* or exploring obscure functionality of programs and devices that they use. They tend to use methods they are already familiar and comfortable with to achieve their goals.

- **Computer Self-Efficacy**: Pat has *medium computer self-efficacy about doing unfamiliar computing tasks*. If problems arise with their technology, they will keep on trying to figure out how to achieve what they have set out to do for quite awhile; Pat doesn’t give up right away when computers or technology present a challenge to them.

- **Attitude toward Risk**: Pat is busy, so they rarely have spare time. So Pat is *risk averse* and worries that they will spend time and not get any benefits from doing so. They prefer to perform tasks using familiar features, because they’re more predictable about what they will get from them and how much time they’ll take.

How Pat Works with Information and Learns

- **Information Processing Style**: Pat leans towards a *comprehensive information processing style* when they need to gather information to problem-solve. So, instead of acting upon the first option that seems promising, they *first gather information comprehensively to try to form a complete understanding of the problem before trying to solve it*. Thus, their style is “burst-y”; first reading a lot, then acting on it in a batch of activity.

- **Learning: by Process vs. Tinkering**: When Pat sees a need to learn new technology, they *do so by trying out new features* or commands to see what they do and to understand how the software works. When doing this, they *do so purposefully; that is, reflecting on each bit of feedback they get* along the way to understand how the feature might benefit them. Eventually, if they don’t think it will get them closer to what they want to achieve, Pat will *revert back to ways that they already knew worked*.
